a — NK2R: peptide length strongly biases raw docking score
REF15 total model score (NK2R)
Peptide length (residues)
Competition Top10
Random controls (mean ± s.d.)
This study (10-mers, n=32)
receptor-matched control

b — NK2R: raw positive docking scores
REF15 total model score
n=10 vs n=32 P = 0.2204
Competition Top10
This study (32 cand.)
Receptor-matched control
c — NK2R: docking score vs experimental potency
z-score vs length-matched random controls
Experimental EC50 (nM, log scale)
Spearman ρ = +0.42
(P = 0.23, n=10)
random-control level
d — NK2R: Delta-on vs structural-neighbour fraction
Fraction with higher structural-neighbour score
Delta-on (candidate − control)
Competition Top10
This study
e — NK2R: structural-neighbour fraction
Fraction with higher score
n=10 vs n=18 P = 0.1699
Competition Top10 (n=10)
This study (n=18)
f — NK2R pocket: pose overlay (Cα traces)
Control (NKA-derived)
Competition champion (COMP-01)
Best of this study (NK2R-27)
